## **Abstracts**

The Latin America, Middle East and Africa Low-Code Development Platform Market would witness market growth of 29% CAGR during the forecast period (2020-2026).

Low-code is a new approach to building different business applications quickly. With a low-code development platform, you don't code the application line-by-line, you draw it — like a flowchart. This makes the development of strong new applications fast and intuitive. Low-code development platforms minimize the amount of conventional hand coding that accelerates the production of software applications. A common benefit is that a broader variety of individuals will contribute to the production of the application — not only those with specific programming skills. LCDPs can also reduce the initial installation, preparation, implementation and repair costs.

The key objective of a low-code platform for developers is to ensure that they reduce the time they spend working on an application relative to conventional hand coding. Using visual interfaces, drag-and-drop components, and more, these low-code systems minimize the manual work of coding to a large degree. They are ideal for developers to build applications of any complexity and are usually not limited to any particular

platform, unless otherwise restricted by the provider. Different kinds of low-code platforms appeal to various needs and customers, and companies may need to consider the specialties of each category before they make a purchase. With the right platform, the organization's growth will be simpler than ever before.
