Abstracts

Machine vision system enables automatic analysis and inspection of the production line, imaging, process control, verification, measurements, robot guidance, and other functions. Machine vision is a full-fledged solution that works from acquiring an image to interacting with the management information system. Machine vision system is a very efficient system that almost negates the limitation caused due to human intervention and at the same time offer significantly high level of error recognition for a long period of time.

Major disadvantages of human inspection such as long-term inconsistency, need for rest, limited speed, and variation of output, would contribute to the growth of the machine vision system market. Machine vision facilitates cost-effectiveness, speed, accuracy and high functionality of an inspection procedure; therefore, it is widely incorporated to significantly improve quality and productivity in the manufacturing process.
