## Abstracts

The Latin America, Middle East and Africa Nephrostomy Devices Market would witness market growth of 9.06% CAGR during the forecast period (2019-2025). The incidence of ovarian, kidney, bladder and prostate cancer underscores the advantages of nephrostomy devices while lessening the composition of the therapy cost in several nations, governments and private organizations. Likewise, the focus is on initiatives that spread awareness about nephrostomy devices. The growth of the market is anticipated to give opportunities to such projects over the years to come.

PCNL is the most preferred minimally invasive technique. Over the years, advances in PCNL have been made in technology and instruments to reduce morbidity and improve efficiency. In the past, major morbidity has been correlated with urological complications following renal transplantation. These cases can now be managed with minimally invasive techniques by the development and application of endourological procedures. Tubeless mini-percutaneous nephrolithotomy (MILT) is one of the most effective ways to treat larger stones in the kidney.
