## **Abstracts**

The Latin America, Middle East and Africa Neurostimulation Devices Market would witness market growth of 13.5% CAGR during the forecast period (2020-2026).

Growth in the market for neurostimulation devices is due to increased use of neurostimulation devices in pain management and increased use of neurostimulation devices in developing economies. In addition, an increase in the incidence of chronic diseases is expected globally to boost the growth of the market for neurostimulation devices.

In addition, the increased demand for minimally invasive treatment, the uptake of technologically advanced products and the rise of aging demographics further accelerate market growth as they become more vulnerable to neurological diseases such as epilepsy, Parkinson's disease, Alzheimer's disease, and chronic pain. The major barriers in the growth of the market for neurostimulation devices are adverse effects such as allergic reactions and tingling or prickling of the skin related to the implantation of the neurostimulation system into the body and higher product costs. The availability of other treatment options such as drug therapies and surgeries however

restrict the market growth.

Based on Devices, the market is segmented into Spinal Cord Stimulators, Deep Brain Stimulators, Sacral Nerve Stimulators, Vagus Nerve Stimulators and Other Devices. Based on Applications, the market is segmented into Pain Management, Hearing Loss, Urinary Incontinence, Parkinson's Disease, Epilepsy and Other Applications.
