## **Abstracts**

The Latin America, Middle East and Africa Osteoporosis Drugs Market would witness market growth of 5.3% CAGR during the forecast period (2020-2026).

Vitamin D deficiency is prevalent in the Middle East and Africa regions, despite the abundance of sunshine during the day. The rate of death after osteoporotic fracture in the area is 2-3 times that of Western societies. The main reason for this is a lack of utilities, with less than one DXA scan for 1 million people in Morocco. Among postmenopausal women, 53.9 percent had osteopenia and 28.4 had osteoporosis. Hip fractures have risen from 1008 a year in 2008 to four times the initial level in 2050.

The major factor contributing to the growth of the market for osteoporosis drugs is the increase in the prevalence of osteoporosis. In addition, other reasons that fuel the growth of the osteoporosis drugs market are the rise for the geriatric population worldwide and the rise in sedentary lifestyles worldwide. However, the adverse effects of osteoporosis medications and the time-consuming medication development procedure impede the expansion of the demand for osteoporosis medicines. Conversely, strong growth potential in developed economies is projected to generate attractive prospects over the forecast period.

Based on Route of Administration, the market is segmented into Oral, Injectable and Other Route of Administration. Based on Drug Class, the market is segmented into Bisphosphonates, Rank Ligand Inhibitors, Parathyroid Hormone Therapy, Calcitonin, Selective Estrogen Inhibitors Modulator (SERM) and Other Drug Classes. Based on countries, the market is segmented into Brazil, Argentina, UAE, Saudi Arabia, South Africa, Nigeria, and Rest of LAMEA.
