Abstracts

The Latin America, Middle East and Africa Portable UV Sanitizing Boxes Market would witness market growth of 17.9% CAGR during the forecast period (2020-2026).

UV means ultraviolet (sometimes it's also called blacklight or UV light) and that is electromagnetic radiation only beyond the spectrum that the human eye can still see. Ultraviolet radiation wavelength is between 100 and 400 nm (nanometer). Ultraviolet light has a shorter wavelength than visible light, and a shorter wavelength makes it more energy-rich. Since UV is more energy-rich, the ionization ability of organic molecules can be reached and chemical reactions can be caused. A distinction is made between UV A, UV B, and UV C in relation to the effects of ultraviolet radiation on humans and the environment.

UV C disinfection is based on absorption by, for example, micro-organisms of UV C radiation. With the rapid absorption of UV-C, the DNA and RNA in micro-organisms are weakened such that micro-organisms can no longer reproduce. As with a regular lamp, the power is expressed in Watt (W) UV lamps. The more Watts the UV lamp has, the more power and effect this lamp would have on disinfection or sterilization.

Ultra-violet (UV) box sanitizers provide a secure and easy way to sanitize your smartphones and other devices. In addition, UV light, in particular UV-C light, is very harmful to the human body. Therefore, take special caution to avoid exposing yourself and others to UV light from the device while using these devices.
