In developing and developed regions of the world, the Middle East and Africa Potato Protein market is driven by increasing health consciousness, as an alternative to meat and other animal products. Furthermore, the growing use of potato proteins by body builders and sportsmen for muscle gain and strength enhancement also contributes to market development. Recent research on the harmful effects of Potato proteins and their derivatives, however, are impeding market development.

Patatin's methods of isolation and purification are compared and summarised. Patatin's functional properties as food additives are subject to comprehensive study. There is emphatic description of the positive effects of patatin on safety and food use. Additionally, the emerging challenges to patatin production as a functional food ingredient are also being discussed.
