## Abstracts

The Latin America, Middle East and Africa Private Cloud Server Market would witness market growth of 36.5% CAGR during the forecast period (2019-2025). Organizations that can gain from the greater flexibility of a virtualized system also consider private cloud. Several organizations manage a wide range of different applications, each existing on their own hardware, especially among medium and large enterprises.

Virtualizing a database that operates a particular application, like email, enables the company to increase or decrease the available resources. This further boosts performance improvements, as more computing power or memory is provided to servers that run more resource-intensive applications. It also offers cost savings as the increased resources are derived from otherwise underused servers rather than individually renting or purchasing them. An enterprise should assess its flexibility, security, compliance, and cost criteria to decide whether it will benefit from deploying a private cloud. It should also understand the technologies it uses and the environment and its resources that are suitable for them. A quality service provider that offers hosting private cloud solutions can assist with these evaluations and make organizational-specific recommendations.
