Remote Patient Monitoring (RPM) Device also known as homecare Telehealth, is a technological device that are used for continually monitoring heart activity, blood pressure, pulse rate, body temperature and other patient related activities. These devices are also useful in inspecting the chronic diseases. The health professionals can examine their patients from the remote locations is one of the major breakthroughs in terms of healthcare advancements. To perform a routine test patient can use the mobile medical devices and can easily send the test data to their respective healthcare surgeon with the help of smartphones or computers.

In the 24th Annual Health Sciences Tax Conference held in December 2014, experts have stated about the leverage of smartphones by the end users such as life science companies, tech start-ups and providers in order to offer remote monitoring to patients worldwide. Additionally, they stated the transition to value-based reimbursement causing the disruption to the health care business model. Reduction in the cost of the hospitals stays, overcrowding in the diagnostic centres, and growing patient care services are some of the key drivers for the growth of the Remote patient devices market. However, lack of skilled professionals, ineffective reimbursement guidelines and issues in device functions would hamper the growth of the market.
