## **Abstracts**

The Latin America, Middle East and Africa Safety Helmet Market would witness market growth of 8.4% CAGR during the forecast period (2020-2026).

Safety helmets or hard hats are considered as the first line of defense against such kind of injuries related to the head. Safety helmets can be considered as one of the most helpful personal protective equipment to wear, shielding the brain, and head from impact injury. A well-built safety helmet is essential while present at such work sites. In different industrial operational conditions, for example, mining, construction, forestry, and power, accidents chances are high that may cause various types of head injuries.

Staffs in worksites are prone to various dangers, for example, collision with heavy bodies, fall from high structures, falling of heavy items to the body, etc. Due to the nature of such works, it is difficult to remove these kinds of dangers with collective protective equipment. Therefore, the only viable approach to ensure the safety of workers is the use of safety helmets. To successfully decrease the risk of accidents and injury, a suitable kind of safety helmet should be utilized. Safety helmets chosen must fulfill different prerequisites of performance, for example, protection from penetration offers optimum comfort to the user and shock absorption.

The safety helmets are available in various designs and features are foreseen to be one

of the key components for market development. Likewise, the high functionality of industrial Safety helmets in a wide array of end-use industries is additionally foreseen to push market development in the next few years.

A bump cap is an alternative to conventionally designed safety helmets. The expanded use of the bump caps can be credited to components, for example, maximum portability combined with lower stress upon the wearer's neck. Nonetheless, the item isn't appropriate for industrial applications that include exposure to serious potential risks. The segment of bump caps product is foreseen to support at a significant CAGR from 2020 to 2026 by virtue of its expanded use in conditions that represent a lower risk of accidents to the laborers. The product type is basically utilized for guaranteeing protection against accidental head bumping to objects that are set overhead at the working environment or shop floor.
