Abstracts

The Latin America, Middle East and Africa Secure Web Gateway Market would witness market growth of 20.9% CAGR during the forecast period (2019-2025).

Strong focus on secure web gateway as security technologies and on the development of cloud-based SWG services also affects strategies of growth. However, as the war of supremacy in creativity intensifies, industry players insist on going further than URL filtering, malware defense and tunneling for advanced security solutions. Such factors have played a crucial role in Symantec's decision to incorporate a range of integrations, including Data Loss Prevention, Endpoint and Messaging Security complementary protection technologies. Such technological developments are expected to encourage other players to follow suit and invest in cloud-based SWG technologies in the secure web gateway industry.

While the digital transformation begins in the banking industry, industrial operators slowly challenge and digitally recreate their own operating models. This will, in effect, play a key role in the growth of the secure web gateway industry. Threat protection requires sandboxes, security of the DNS, improved safety and antivirus. Sandboxes should be used without affecting the host or networks to securely execute malicious code. They protect all users of networks on or off the network for zero days. DNS
