## Abstracts

The Latin America, Middle East and Africa Security Orchestration Automation and Response (SOAR) Market would witness market growth of 20.6% CAGR during the forecast period (2019-2025). Solutions for security orchestration protect healthcare apps and information from vulnerabilities. The fast adoption of SOAR alternatives in the medical industry has also been driven by increased public regulations, such as HIPAA compliance. The regulatory standards assist in the protection of sensitive information, identification protection by offering digital signatures, network portals secure and database encryption.

Multiple internal security teams carry out distinctive duties in many major companies. In some cases, access to the data collected by other internal teams may not be appropriate for some internal teams. As a force multiplier, MSSPs are also starting to turn to SOAR systems and require very strict client information segregation. In either situation, deploying one SOAR solution for every team or customer is not cost-effective. A SOAR solution must support several cases on a single host, provide precise data separation and access controls for the information of each tenant. SOAR was not designed as a platform for the management of vulnerabilities and would never replace existing robust vulnerability management systems.
