Abstracts

Software-defined storage manages the storage infrastructure by separating storage hardware from the software. Functions such as de-duplication, replication, snapshots, and backup and restore capabilities are provided within the system. By incorporating SDS system, the enterprises have the flexibility to design their own application and also leverage multiple storage hardware without being worried about interoperability and under or over utilization of servers. Software-defined storage is a powerful platform that is rapidly gaining widespread acceptance. The numerous benefits offered by the technology in storage administration are responsible for the widespread adoption of the technology. Software-defined storage may be implemented via appliances over a traditional Storage Area Network (SAN), or implemented as part of a scale-out Network-Attached Storage (NAS) solution, or as the basis of an Object-based storage solution. In March 2014 SNIA began a Draft Technical Work available for public review on Software-Defined Storage.
