Abstracts

The Latin America, Middle East and Africa Spinal Cord Stimulation Devices Market would witness market growth of 9.06% CAGR during the forecast period (2019-2025). The growing amount of chronic and neuropathic pains in patients and the simultaneous introduction of new products by leading companies is further pushing the industry growth.

Spinal cord stimulation is referred to as a neuro-stimulation treatment that cures specific pain conditions like chronic pain. The stimulation process uses stimulators to block the pain signals before they reach the brain. A stimulator device is implanted under the patients' skin and it sends electric signals to the specified areas of the spinal cord for treating the pain. When the stimulator device is switched on, it modifies the pain signal that travels to the brain. It contains a small wire which carries electrical signals to transmit it towards the nerve fibers of a spinal cord. With this capability, spinal cord stimulation devices can effectively help to reduce the pain due to electrical pulses and mask the pain signal from reaching the patient's brain.
