The Latin America, Middle East and Africa Surface Vision and Inspection Market would witness market growth of 12.4% CAGR during the forecast period (2019-2025).

The surface vision and inspection market is expected to experience substantial growth owing to rapid technical advancements over the projected period. Growing consumer preferences and competition for better quality goods are driving development for different technology applications.

The increase in demand for vision and inspection systems across manufacturing industries is projected to boost demand over the coming years. Advancements in industrial activities have contributed to mass production in order to reduce overall operating costs. Nevertheless, this raises the probability of errors and defects, making machine vision (MV) systems necessary for high product quality. Surface vision and inspection systems help eliminate waste, improve production performance and decrease production costs.

In addition, these systems provide immediate quantitative feedback, such as quantity and type of defect. Further, ongoing technical advancements have led to better systems with high accuracy and decreased application development time. Due to stringent
