Abstracts

The Latin America, Middle East and Africa Surgical Drains Wound Drainage Market would witness market growth of 5.4% CAGR during the forecast period (2018 – 2024).

The regular use of drains in surgical procedures has been diminishing over the years, as better radiological investigation and confidence in surgical techniques have limited the need for the same. With advancements in the field, it is found that drains could hinder recovery by acting as an 'anchor', and at the same time limiting mobility post-surgery. It is also found that, the use of drains may lead to infections in the wound. Despite the case, the use of drains is inevitable in some cases. Drains may be hooked to wall suction, to a portable suction device, or they may be left to drain naturally. The growth of this market is mainly driven due to the growing geriatric population, increasing number of surgical procedures, and rising awareness among end users, globally. On the other hand, the risks associated with the use of surgical drains would limit the market growth during the forecast period.

Based on Product, the market is segmented into Accessories, and Surgical Drainage Systems. Based on Type, the market is segmented into Active Drains and Passive Drains. Based on End User, the market is segmented into Hospitals and Ambulatory Surgical Centers (ASCS) & Clinics.
