## **Abstracts**

The Latin America, Middle East and Africa Surgical Lights Market would witness market growth of 6.7% CAGR during the forecast period (2020-2026).

Operating lights are a necessary part of any operating room or surgical suite and are available in a range of configurations, wattages, and features. Large selections of surgical lights are currently available on the market, including big, ceiling-mounted OR lights and compact, lightweight test lights. The latest generation of surgical lighting uses LEDs for their light source.

Surgical light manufacturers have switched from halogen and metal halide to LEDs for their light sources because they last longer than conventional incandescent versions and also use LCD touchscreens to change the illumination and spotlight settings. LED surgical lights can be equipped with high-definition cameras and displays offering the latest equipment to surgeons. They can be mounted on the wall and ceiling in several configurations. Several vendors sell surgical lights with battery backups to ensure that the surgical team has lighting in the case of any electrical disturbance.

The growing number of hospitals, increased investment in operating room equipment, and a rise in the global geriatric population are the key factors driving the market growth of surgical lights. In addition, the rise in regulatory approvals for specific surgical lights is driving the market growth. In addition, increased product availability, a substantial increase in demand for well-equipped surgical lights to enhance the visibility and accessibility of healthcare facilities, and enhanced healthcare infrastructure in developing economies are boosting the growth of the market for surgical lights.

Based on Type, the market is segmented into Halogen and LED.

Based on Application, the market is segmented into Cardiac Surgery, Gynecological
