Abstracts

The Latin America, Middle East and Africa Application Gateway Market would witness market growth of 14.1% CAGR during the forecast period (2019-2025).

An application layer is an abstraction layer that specifies communications protocols as well as interface methods in a communications network that the hosts are using. The abstraction from the application layer of the Internet Protocol Suite (TCP /IP) and the OSI models are used in both standard computer networking models. The application layer delivers full end-user access for an efficient OSI data flow of a variety of shared network services.

Large companies are early adopters of application gateway solutions because they use a significant number of Internet of Things (IoT) and web applications that are vulnerable to cyber-attacks. Since these firms are large-scaled and have different types of IT infrastructure, they are faced with the difficult task of effectively managing the security of a number of applications across the organization. Sensitive business information and documents are regularly communicated through emails and other networks between employees, clients, and vendors, which put network security at risk from cyber-attacks. Large companies are targeted by cyber attackers due to their high number of employees. Business communications across the network of large enterprises are therefore more susceptible to cyber-attacks.

Based on Component, the market is segmented into Solution and Services. Services segment is further bifurcated into Integration & Deployment, Advisory & Consulting and Support & Maintenance. Based on Organization Size, the market is segmented into Large Enterprises and Small & Medium-Sized Enterprises. Based on End User, the market is segmented into BFSI, Retail, Manufacturing, Government & Public Sector,
