The Latin America, Middle East and Africa Biosensors Market would witness market growth of 13.1% CAGR during the forecast period (2019–2025).

Biosensors are used in the food industry to measure carbohydrates, alcohols, and acids, during quality control processes. The devices may also be used to check fermentation during the production of beer, yogurt, and soft drinks. Another important application is their use in detecting pathogens in fresh meat, poultry or fish. Biosensors are also used to check the quality of air and water. Also, the devices can be used to pick up traces of organophosphates from pesticides or to check the toxicity levels of wastewater.

Some of the popular fields implementing the use of biosensors are food industry to keep a check on its quality and safety, to help distinguish between the natural and artificial; in the fermentation industry to detect precise glucose concentrations; in metabolic engineering to enable in vivo monitoring of cellular metabolism. The role of biosensors in medical science includes early stage detection of human interleukin-10 causing heart diseases, rapid detection of human papillomavirus, and so forth. Fluorescent biosensors play a vital role in drug discovery and in cancer.
