Abstracts

The Latin America, Middle East and Africa Electric Mobility Market would witness market growth of 31.4% CAGR during the forecast period (2019-2025).

Electric vehicles are accepted as a central technology for sustainable transport; the new clean vehicles are already developed and known to be efficient hybrid vehicles. Full electric vehicles are also coming into the market and have an additional advantage of zero local emissions, quiet engines, and the potential to use various (also renewable) sources of energy in road traffic, which have not yet been used. Electrical mobility can be seen as a development of the cross-industry. Although the combustion engine technology is completely developed, electrical propulsion systems are already in the early stage of industrialization for the use of the automotive and off-road industry. There has been a prolonged issue of mobile electricity storage for road traffic. Batteries have been bulky and had a low density of energy; thus electric vehicles had a very short range of driving. Recent technological developments introduced by consumer electronics like laptops and mobile phones have resulted in significant improvements in battery performance. Electric vehicles are now seen as a significant alternative to conventional vehicles.

Based on Battery Type, the market is segmented into Li-ion, NiMH and Sealed Lead Acid. Based on Voltage, the market is segmented into 24V, Greater than 48V, 48V, 36V and Others. Based on Product Type, the market is segmented into Electric Car, Electric Scooter & Motorcycle, Electric Bicycle, Electric Skateboard and Others.
