## Abstracts

The Latin America, Middle East and Africa Facial Fat Transfer Market would witness market growth of 11.4% CAGR during the forecast period (2019-2025).

The Middle East and Africa region have been estimated to contribute to worldwide market development. Nonetheless, due to the under-developed status of various African countries, growth is minimal. The Middle East is expected to be responsible for the growth of these global segments due to the high prevalence and acceptance of cosmetic procedures among women in the region. Fat Transfer is not just a bioinert material, but a metabolic active substance and a live graft. Facial Fat Transfer procedures are therefore done only by experts or cosmetic surgeons. The procedure consists of collecting small amounts of fat from other parts of the body, such as the thighs, abdomen or hips, and injecting it into areas of the face that are depleted. It reduces lines and reshapes the face, improving the overall youthfulness of facial appearance.

Fat transfer procedures have been extremely popular, where the stem cells stored in body fat are harvested and transferred to the facial folds for a youthful and plumper look. Microneedling is yet another method adopted for the same. The micro-needling procedure is also called as the collagen induction therapy and is a minimally-invasive skin rejuvenation treatment that uses the Skin Pen, a tool which includes fine needles. The needles are used to gently puncture the skin and activate the body's natural wound healing mechanism. This results in a remodeling of the skin surface, such as the formation of collagen and elastin, providing the skin a smooth and youthful look.
