Abstracts

The Latin America, Middle East and Africa HR Analytics Market would witness market growth of 17.2% CAGR during the forecast period (2019–2025).

HR analytics deals with gathering data on employee efficiency and also aims to provide insight into each process by gathering data and then using it to make relevant decisions about how to improve processes. Business leaders can analyze this data from previous mergers, acquisitions, layoffs, and use it to predict and deal with any changes they want to have in their company. They can do this because the data they get from HR will enable them to study their employees' behavior, the patterns of overtime, how they use their time, etc. This helps them in understanding the performance and production of their workforce.

AI has displayed tremendous potential for solving HR problems, including, producing reports, taking care of service tickets, and ensuring data are stored and disseminated accurately without needing human intervention. However, there are limitations. It is widely agreed that there are some things AI can't replace, such as human creativity, emotional intelligence, and empathy, to name a few. When companies first launch their business, they are often too wrapped up in startup mode to foresee the needs of the business at scale.
