Abstracts

The Latin America, Middle East and Africa Hybrid Imaging Market would witness market growth of 5.48% CAGR during the forecast period (2019-2025).

The Middle East is an expanding market of hybrid imaging systems. Growth in the Middle Eastern countries has been associated with higher disposable income and a remarkable contribution by government investment in healthcare. Manufacturers currently focus on the development of high-quality hybrid imaging systems like PET & MR, which provide accurate assessment in the identification of lesions and metastases. Key players are mainly focused on developing subsidiaries in countries where there is little presence for post-sales services.

Different approaches to hybrid imaging include line systems where the two devices are sequentially-mounted, and parallel imaging facilitates procedures to be conducted with a single system known as hardware fusion. Parallel imaging is expected to result in disruptive innovation due to lower installation costs and prompt imaging times. Advanced diagnostic capabilities can also be achieved by hardware and software innovations. For example, SPECT disadvantages have been partially overcome by cutting the scan times using triple-head gamma cameras, enhanced solid-state detectors, and computer-aided image enhancement.

Based on Application, the market is segmented into Oncology, Ophthalmology, Cardiology, Brain & Neurology, and Other Applications. Based on Type, the market is segmented into PET/CT systems, SPET/CT systems, PET/MR systems, OCT/Fundus Imaging System and Other types. Based on End Use, the market is segmented into Hospitals, Diagnostic Imaging Centers and Other End Use. Based on countries, the market is segmented into Brazil, Argentina, UAE, Saudi Arabia, South Africa, Nigeria,
