Abstracts

The Latin America, Middle East and Africa Knee Braces Market would witness market growth of 5.28% CAGR during the forecast period (2019-2025).

Orthopedic bracing and support devices are used in the clinical treatment of ligament injuries like anterior cruciate ligament, medial collateral ligament, posterior cruciate ligament, lateral collateral ligament, and coronary ligament injuries. A large proportion of the ligament injury segment can be ascribed to increased public participation in sports and athletic activities (along with the increasing incidence of sports-related injuries), high rate of accidents globally, and extensive availability of medical reimbursement for ligament injuries.

Knee braces are used for a wide range of problems and illnesses. Functional knee braces are designed to replace damaged ligaments. For instance, a patient who has an ACL tear can be offered to wear a knee brace to allow certain activities to be performed without surgery. Prophylactic knee braces are used to prevent injury to the knee. Prophylactic knee braces are worn by sportspeople who engage in some high-risk sports to reduce their risk of a knee injury.

Osteoarthritis is a gradual, progressive degenerative disease. In the younger generation, this condition is generally the result of a previous knee injury. However, in the older population, the predisposing factors may be repetitive knee strain; fractures; meniscal injuries that may affect alignment and cause wear and tear; recurrent patellar dislocation and patella fracture; trauma; hypermobility due to ligament laxity or injury; and genetics.

Based on Application, the market is segmented into Arthritis, Sports, Ligament and

Other Applications. Based on Product, the market is segmented into Functional, Unloader, Prophylactic and Rehabilitative.
