Abstracts

The Latin America, Middle East and Africa L-Carnitine Market would witness market growth of 5.97% CAGR during the forecast period (2019-2025).

L-carnitine supplements are used to improve the lactation rate in cows. In addition, for growing sheep, oral administration of L-carnitine is recommended to increase concentrations of plasma glucose. Consistent use of L-carnitine supplements, however, has been shown to have positive effects on growth efficiency, carcass composition, and pig breeding. Changing the elderly population's eating habits also leads to low appetite and lower levels of energy. The reduction in nutritious food consumption results in decreased dietary intake of both L-carnitine and L-carnitine nutrients. This reduction in energy metabolism can be reversed with L-carnitine supplementation because of the low levels of L-carnitine.

Recent studies suggest that the use of L-carnitine may be a significant contributor to the advancement of neuropathy treatments. It is also a highly advantageous health protection agent. Therefore, the global market's leading players are focused on developing new and more specialized innovations that can help determine the value of L-carnitine in the global healthcare industry. The next few years with L-carnitine are expected to be a period of new and fresh technologies with rising research and development. This trend is expected to facilitate the growth of the global market.
