Abstracts

Machine learning chip is a kind of multiprocessor system which enables the machines to gain human-like intelligence without the need of explicit programming. With the human-like intelligence, the chips are endowed with features such as learning, reasoning, and self-correction. Additionally, machine learning algorithms also use the feedback data to identify the patterns in the new data and accordingly adjust program actions. The machine learning chips facilitate continuous development of computing through exposure to new scenarios, testing, and adaptation.

Machine learning chips can be incorporated into a highly insensitive data transmission platform. Nevertheless, insufficient skilled workforce would have an adverse impact on the performance. The implementation of a reliable and effective technology in the future would reduce complexity. Numerous industries, such as robotics, healthcare, automotive, and consumer electronics have explored the possibilities of the machine learning chip and implemented the technology to enable features such as learning, reasoning, and self-correction. Innovative chips for applications in healthcare and electronic appliances have been the focus of the major market players, to improve efficiency. Neuromorphic chip, which are used for gaming, driverless vehicles, drones and air transport, security & cyber security, speech and image recognition, stimulate the growth of the machine learning chip market. Huge amount of complex data, growth in portable electronic market, and rapid growth in the adoption of Internet of Things (IoT) are the major factors that drive the Latin America, Middle East and Africa machine learning chip market.

The Latin America, Middle East and Africa machine learning chip market is segmented based on type, application, and country. Based on type, the market is segmented into GPU chip, neuromorphic chip, flash based chip, and FPGA chip. Based on the
