The Latin America, Middle East and Africa Laparoscopy Devices Market would witness market growth of 7.5% CAGR during the forecast period (2018 – 2024). Laparoscopy is a popular surgical diagnostic procedure which is rapidly getting adopted for examining the organs inside a patient's abdomen. The laparoscopy approach is a low-risk, minimally invasive procedure which carries out small incisions. The surgery involves the use of a laparoscope along with other devices, through which the surgeon can visualize and perform a surgery with minimal incision in the patient's body. Laparoscopes are long, thin tubes with high-intensity light and a high-resolution camera that are attached to the front. This instrument is placed through a small dissection in the abdominal wall. The camera transmits pictures to a video monitor while it moves within the body. Laparoscopy enables the doctor to see inside a patient's body without open surgery in real time. The growing demand for laparoscopic surgeries especially the bariatric surgeries has contributed significantly to the market growth. The rising prevalence of morbid obesity has raised the demand for the surgeries such as sleeve gastrectomy, gastric bypass, and gastric banding through laparoscopy
