Abstracts

The Latin America, Middle East and Africa Microcrystalline Cellulose Market would witness market growth of 6.5% CAGR during the forecast period (2019-2025).

In the pharmaceutical industry, microcrystalline cellulose is a widely used excipient. It has great characteristics of compressibility and is used in types of solid doses such as tablets. Tablets that are created are hard but dissolve instantly. Microcrystalline cellulose is like cellulose, except that it meets USP standards. It is also present in many processed food products and can be used among other uses as an anti-caking agent, stabilizer, modifier of texture, or suspender. Microcrystalline cellulose is usually considered safe when used in normal amounts.

During the forecast period, rapid development in the food & beverage sector and increased demand for low-fat processed foods is anticipated to encourage business growth. For a longer duration, packaged and processed food products need to be kept fresh, requiring bulking, consistency and anti-caking agents. The leading factors of market growth are these characteristics of microcrystalline cellulose.
