Abstracts

The Latin America, Middle East and Africa Orthopedic Software Market would witness market growth of 7.37% CAGR during the forecast period (2019-2025).

Orthopedic software solutions will pave the way for the industry's development shortly. Other driving factors of the market are technological advances and the acceptance of minimally invasive surgery in growing and developed countries. On the contrary to other specialties, running a modern practice in orthopedics involves a large number of time-consuming procedures that can hinder daily operations compared to other specialties. As soon as a patient calls or enters the facility, the staff will need to collect, store, and update an enormous amount of information. In such cases, practice management (PM) software is implemented. PM software is designed to help team members validate each patient's insurance status and arrange appointments. They can also use the software to reduce the time and effort needed to handle any claims that insurance providers have denied.

Preoperative planning for elective total hip arthroplasty (THA) has become essential because it prevents complications and improves important geometric parameters like rotation center, leg length, and femoroacetabular offset adjustments. Several digital planning software programs have been offered with extended use of digital radiography, which delivers high precision. It is possible to combine digital radiography with digital templating to remove errors linked to manual manipulation of acetate templates as well as analog radiographs. Besides, new precision technology for total hip replacement (THR) and total knee replacement (TKR) is being developed by companies.

Based on Product, the market is segmented into Digital Templating/ Preoperative Planning Software, Orthopedic EHR, Orthopedic Practice Management, Orthopedic PACS, Orthopedic RCM and Others.
