Abstracts

The Latin America, Middle East and Africa Radiology Information System Market would witness market growth of 8.5% CAGR during the forecast period (2019-2025).

Radiology Information System (RIS) market growth is associated with a rise in population and investments in R&D activities. Further, the market is also witnessing a higher number of radiology professionals & practices, and web-based solutions preference. Computerized medical imaging offers secure and convenient interactive documentation. These records can be accessed across different departments of healthcare. RIS provides a communication channel for better coordination of care between primary physicians and imaging centers. This can be helpful to patients for prompt diagnosis or treatment. Both factors are expected to work well for the growth of the market.

Healthcare providers are eligible for receiving financial incentives for using approved RIS technology. For such incentives, the care providers have to demonstrate the extensive use of the technology in stage 2. Government initiatives like these can contribute majorly towards the extensive adoption of RIS technology among radiologists and medical imaging professionals.

Based on Mode of Deployment, the market is segmented into Web-based, On-premise and Cloud-based. Based on Product, the market is segmented into Integrated Type and Standalone Type. Based on End Use, the market is segmented into Hospitals & Clinics, Outpatient Department (OPD) Clinics and Others.
