## Abstracts

The Latin America, Middle East and Africa Surgical Imaging Market would witness market growth of 6.45% CAGR during the forecast period (2019–2025).

Most spine surgeries today are done using minimally invasive techniques to spare muscle and healthy tissues. To do this effectively, some form of intraoperative imaging is used for verifying the accuracy in surgical procedures. The intraoperative images help make sure that a spinal implant is placed in the desired place or that a tumour is dissected to the desired outcome. Along with delivering efficient imaging resolution and navigation to guide operation, the mobile CT scanner also enables a surgeon to obtain immediate CT images at the completion of surgery. This further allows for immediate intraoperative intervention if necessary before surgical closure. The increasing demand for integrated imaging systems and technological advancements in imaging systems, including the launch of O-arms and G-arms, further boost the market growth. Nevertheless, the high cost of surgical imaging systems can restrain market growth.

Based on Modality Type, the market is segmented into Mobile C-Arm, Mini C-Arm and Others. Based on Technology, the market is segmented into Flat Panel Detectors and Image Intensifiers. Based on Application, the market is segmented into Neurosurgery, Orthopaedic & Trauma Surgery, Cardiac & Vascular Surgery, General Surgery and Other Surgery.
