Abstracts

The growing needs for safety of laborers and stringent laws that govern the same have led to the deployment of robots in critical environments. Dangerous work areas now have robots deployed to ensure safety of the working class. Robots limit the risks and reduce the number of work accidents, driving the adoption of robots and robotics solutions. Vision Guided Robotics is a technology used in the robots as sensors to provide a feedback indication to the robot controller to accurately move to variable target locations. The vision guided robotic systems have an independent operational system which makes them efficient, enhancing quality, while significantly reducing the possibility of human errors and wastage of resources. Vision guided robotics technology has significantly influenced the production processes by making robots highly flexible, reducing cost and complexity of fixed tooling which was associated with the design and set up of robots.

Based on the component type, the Vision Guided Robotics market is segmented into Hardware, Software and Services. The vertical covered under the report includes Automobile, Electronics, Food & Beverages, Aerospace & Defense, Pharmaceutical & Medical and Others.
