Abstracts

The Latin America, Middle East and Africa Voice Picking Solution Market would witness market growth of 18.9% CAGR during the forecast period (2019-2025). Voice picking systems are a cost-effective choice with a large number of SKUs to be serviced. Due to a hands-free, eyes-free operation, workers are able to hear instructions and perform tasks without looking down on a handheld computer screen or sort through a pack of picking labels. The voice terminal connects wirelessly and in real-time with the host computer or WMS, asking the user to complete a task with audible commands, and waiting for a verbal confirmation or request.

The number of warehouses and distribution centers operating worldwide is growing rapidly in line with growing online grocery sales; policies like next-day delivery, pursued by retailers; and the corresponding development of the ecommerce and retail industries. As a result, companies are actively implementing a variety of solutions, including voice-picking solutions, to meet customer requirements. Dynamic consumer behavior and increasing focus on customer satisfaction often enables organizations to opt for a voice picking solution.

Voice-directed systems are mostly used in warehouses and distribution centers that distribute goods on a case-by-case basis or in volumes that are less than the case. DCs that only receive and ship full pallets often use voice, although the productivity advantages of voice compared to other technologies (RF or barcode scanning) may be limited due to the huge amount of travel involved in full pallet movements within a DC.
