## Abstracts

The Latin America, Middle East and Africa Wireless Mesh Network Market would witness market growth of 13.4% CAGR during the forecast period (2017 – 2023). A wireless mesh network (WMN) is a mesh network that is created through the connection of wireless access points which are installed at each user's network location. A wireless mesh network (WMN) is a communications network and it is made of radio nodes which are organized in the fashion of mesh topology and it is also a form of wireless ad hoc network. Within the wireless mesh network, the mobility of nodes is less frequent which helps in delivering data effectively. Within a wireless mesh network, the topology tends to be more static, so that routes computation can converge; therefore, the delivery of data to specific destinations can occur. Hence, the WMN is a low-mobility centralized form of wireless ad hoc network.

The widespread adoption of artificial intelligence and IoT technology has driven the adoption of WMN technology. The rapid uptake in the mobile and handset devices has further added to the demand for WMN solutions.
