The North America Access Control Reader Market would witness market growth of 12.0% CAGR during the forecast period (2019-2025). Access Card users are used to read a credential that enables access to, typically, a locked gate by means of access control points. A magnetics bar code reader, strip reader, proximity reader, smart card reader or biometric reader can be an access control reader. Access control system is one of the most common electronic gate control systems available with a magnet card or a magnet stripe accessible via a door reader. These access control systems are used for purpose of security.

Magnetic stripe, proximity, or smart card readers are called as the card-based readers. Card readers are relatively more reliable as compared to the biometric readers and electronic locks. One of the main drivers for the growth of card-based readers is enhanced demands for smart and proximity cards to monitor and record staff operations. Smartcards have demonstrated that they are more accurate than magnetic stripes and nearby cards. One of the drivers to increase the development of smart card readers is the growing demand for smart and nearby cards to track and record employee activities.

The access control reader market is driven by a wide range of factors. For instance, there is a rapid expansion in urbanization with the rise of smart cities. This trend is projected to offer significant growth opportunities to market players of the market. In these economies, the concentration of industrial development in cities leads to a growing demand for infrastructure is expected to boost the demand for advanced biometric solutions and smart cards.
