Abstracts

The North America Antibacterial Glass Market would witness market growth of 9.1% CAGR during the forecast period (2020-2026).

Antibacterial glass inhibits the growth and spread of bacteria and fungi on the surface of the glass. Therefore, it is a key preference in bringing a revolution in the glass design industry. With antibacterial property, silver ions can destroy about 99% of bacteria and also prevents the formation of fungi. Antibacterial glass is used in areas where maintenance of strict hygiene is a must.

End-user industries including food & beverage and hospital are witnessing a progressive demand for antibacterial coating. This is the reason why it is predicted that in the future, the global market of antibacterial glass will expand. Preventing the growth and spread of microbial germs is a better option than choosing any other alternatives. There are many applications in the health care industry especially in geriatric oncology, maternity ward, infirmaries, and burn unit. In the medical sector, attention has been shifted towards those products that can inhibit infections and disease spread, this will further help the antibacterial glass market to increase its share in the market.

To prevent bacteria-related diseases, there is an increasing demand for the use of antibacterial glasses in households. Places in the homes that are damp like bathrooms and washrooms etc. are more prone to the growth of bacteria. With the rise in the living standard of urban population and disposable income, there is the increased use of

antibacterial glass in homecare and this is the other factor that can fuel the demand of antibacterial glass in the market.
