## **Abstracts**

The North America Autonomous Mobile Robots Market would witness market growth of 22.8% CAGR during the forecast period (2020-2026).

Robotic technology is showing increased adoption in numerous commercial and industrial settings. For instance, hospitals are nowadays using autonomous mobile robots in order to track patient health, and move materials. The professional service robots are also used in the military & defense sectors that are set up for combat scenarios. Furthermore, mobile robotics improve the soldier's capabilities and it gives troops a lead at the ground level. Also, a field robot which is a professional service robot is also used in this sector to perform a variety of functions like operating in life-threatening situations that are capable to protect soldiers, carrying heavy equipment, and also capable to rescue wounded soldiers in battle zones.

Autonomous mobile robots hold positions in a modern working place. In recent times, Amazon set up an army of mobile robots in warehouses. These robots are designed in such a way that they are able to work autonomously to organize, manage, and carry out particular tasks. For example, in Amazon, the robots performed as expected, and thereby the company continues to adopt such technology as a feature of its warehouses. Moreover, there are also numerous challenges that are faced while working with these machines. Existing robotic systems or the ones that were formerly

used in Amazon warehouses were not competent to work safely with these robots. Because of this, there were collisions on certain occasions. Though it did not result in any severe incidence, it also showcased the possible challenges that arise while working with the technology.

With the advancement in technology of robotics and amplified flexibility in the application of robotics, nowadays robots also cover huge applications in the healthcare industry. Robots have proved to be helpful in hospitals, pharmaceutical companies, clinics, and medical device manufacturers. The mobile robotics applications in the healthcare industry include specimen delivery, drug transportation, pick & place, and patient care.
