Abstracts

The North America Body Area Network Market would witness market growth of 10.9% CAGR during the forecast period (2019-2025). Increased adoption of smart devices like smartwatches, implantable devices, fitness trackers; increased prevalence of chronic diseases and lifestyle-related disorders; increased cost of healthcare; increased demand for improved healthcare services; and extensive government initiatives to promote digital health records are likely to encourage market growth. Escalating penetration of 3G and 4G networks and higher awareness of self-health management are factors that can be related to the growth of North America's body area network market.

Bluetooth is presently the most trusted technology used in body area networks, among many other technologies like Wi-Fi and ZigBee. This reliance can be attributed to the significant revenue share of the body area network landscape. While this trend is likely to be effective in the coming years, the advent of electro-quasistatic or magnetoquasistatic signals could provide network providers with a means for much speedier, more effective and more secure transmission. Constant advancements in telecommunications technologies are anticipated to have a huge impact on developments in the body area network market in the future.
