Abstracts

The North America Bone Densitometers Market would witness market growth of 3% CAGR during the forecast period (2017 – 2023).

A bone density test measures calcium and other minerals in a given bone segment. Weak bones limit the ability to conduct daily activities. Broken bones, particularly major breaks such as hip fractures, can lead to disability and pain that is ongoing. Osteoporosis leads to bone thinning and porous, decreasing bone strength and eventually leading to a risk of breaking bones. As per Osteoporosis Canada, one in five men and one in three women would suffer from osteoporotic fracture at some point in time.

Growing prevalence of osteoporosis, Paget's disease, and osteogenesis imperfecta are the major factors that that would contribute to the growth of the bone densitometer market during the forecast period. Osteoporosis is a disorder which is major and can lead to fragile bones which would eventually break over a period of time. The biggest challenge is the disorder does not show any symptoms or discomfort until bones start breaking. BDM is used to predict the risks pertaining to bone fractures in individuals with poor bone density, which would drive the market growth during the forecast period.
