Abstracts

The North America Canned Legumes Market would witness market growth of 5% CAGR during the forecast period (2020-2026).

Canned legumes are considered to be highly nutritious because they contain protein, carbohydrate, fiber, B vitamins, copper, iron, manganese, magnesium, phosphorus, and zinc. They are low-fat, free of saturated fat, and free of cholesterol. Therefore, vegan and vegetarian diets are gaining popularity. In addition, the coronavirus pandemic has significantly increased demand for canned products, including legumes, since March 2020 as consumers have been stocking up on long-lasting essentials. The rise of panic shopping has fueled market growth for these legumes across the globe.

In addition to their nutritional superiority, the cultural, economic, physiological, and medicinal roles of legumes have also been attributed to their possession of beneficial bioactive compounds. Research has shown that the majority of bioactive compounds in legumes have antioxidant properties which are important for the prevention of certain cancers, heart conditions, osteoporosis, and other degenerative diseases.

Various studies have suggested that the consumption of legumes may help to reduce weight. This could be attributed to low fat and high dietary fiber nature of the legumes. The low GI nature of legume carbohydrates also helps to stabilize blood sugar and insulin levels, making the consumer feel satisfied for longer periods of time. This results in less and less frequent eating, which is perfect for weight management.

Based on Product, the market is segmented into Beans, Chickpeas, Peas and Other Products. Based on Distribution Channel, the market is segmented into Offline and Online. Based on countries, the market is segmented into U.S., Mexico, Canada, and
