## **Abstracts**

The North America CNC Metal Cutting Machine Market would witness market growth of 5.8% CAGR during the forecast period (2019-2025).

The shift of manufacturers to smart manufacturing has resulted in the growth of the demand for CNC machine tools. The metal processing industry has evolved dramatically over the last few years. Increasing emphasis on automation, high connectivity, and data collection result in factories functioning as a single, coherent, and wholesome system. In addition, the machine tools industry is pursuing the Fourth Industrial Revolution (Industry4.0) which is projected to drive the proliferation of smart factories and result in the growth of smart machine tools. Intelligent devices can collect data and help to save resources. For example, a smart meter is expected to help in the efficient flow of energy.

CNC metal cutting machine tools are gaining traction due to the increasing demand for high precision, time and energy efficiency in the metal fabrication industry. The increased demand across widespread applications like grinding, turning, shaping, drilling and sawing, lead to extensive product penetration. This would contribute to the growth of the market for CNC machine tools. In addition, the increasing demand for electrochemical machining has resulted in a rise in the segment of metal cutting tools. The increased demand can be attributed to various advantages of electrochemical

machining and electrochemical micromachining for enhanced surface integrity in different applications such as stress-free drilled holes in the automotive sector and complex shapes in the aerospace industry.
