Abstracts

The North America Corneal Topographers Market would witness market growth of 5.8% CAGR during the forecast period (2020-2026).

Corneal topographer is a non-invasive imaging tool which allows corneal surface mapping and examination. Topograph includes a detailed description of the different features of cornea curvature and shape. Mapping corneal topography is important for determining vision quality, as the refractive strength of the eye depends greatly on cornea and overall corneal health. Computerized corneal topography aids in assessing other ophthalmic conditions and in examining corneal injuries involving corneal abrasions, corneal disorders, corneal deformities, post-operative cataract detachment, and abnormal astigmatism.

Increasing number of surgical operations in different health care facilities including hospitals, clinics, and outpatient care centers is also projected to raise demand for advanced corneal topographers. According to the Refractive Surgery Council survey, nearly 843,000 vision correction procedures such as LASIK, PRK, and SMILE were conducted in the U.S. in 2018, marking a 6.2 percent improvement overall compared to 2017.

In addition, government and non-governmental organisations' growing emphasis on the prevention and elimination of preventable ophthalmic disorders is projected to create a lucrative opportunity for corneal topographers in the industry. The National Keratoconus Foundation (NKCF) aims to increase awareness and knowledge of corneal surface conditions like keratoconus. NKCF is also dedicated to supporting scientific research to effectively detect and treat keratoconus.

Based on Product Type, the market is segmented into Placido Disc System, Scheimpflug System and Scanning Slit System.

Based on Application, the market is segmented into Refractive Surgery Evaluation, Corneal Disorder Diagnosis, Cataract Surgery Evaluation, Contact Lens Fitting and Other applications.
