With voluminous business data, backup and recovery of the data has been among the most pressing issues, globally. With the wide spread adoption of cloud computing and software-defined data centers with virtualized infrastructure components delivered as a service has further added to the concern of data protection and backup. The Data Protection as a Service gained prominence as cloud service providers demanded a better level of security for data which is being stored in different locations. DPaaS is a web-delivered cloud-based service which is designed to offer safety and security for data assets of businesses.
