Abstracts

The North America Deep Learning Chipset Market would witness market growth of 35.4% CAGR during the forecast period (2019-2025).

With the increasing need to streamline large volumes of data (training) and computational responses (inference), there has been an exponential growth in demand for highly advanced deep-learning chipsets. Many deep learning chipsets have been created for use in data centers around the world. Nonetheless, the trend is expected to eventually shift as stakeholders in the deep learning chipset market plan to perform most of the processing at the edge of and closer to the sensor arrays. AI businesses are investing their resources for developing chipset-based deep learning technologies. Although deep learning chipsets will persist to be adopted in data centers, it is expected that AI processing will be used in devices of the next generation, such as security cameras, smartphones, drones, etc.

Deep learning is anticipated to drive Artificial Intelligence (AI) adoption in various companies. It's an undeniable fact that deep learning is the major driving force and the most important path to artificial intelligence (AI). Increasingly sophisticated video technology is revolutionizing the global security industry and helping in the struggle against crime. Developing artificial intelligence (AI) especially towards deep learning

would create a remarkable significance in the coming years, at least in video surveillance systems, in relation to proactive security systems. Such factors are expected to boost the deep learning chipset market over the forecast period.
