Abstracts

The North America Digital Lending Platform Market would witness market growth of 19% CAGR during the forecast period (2019-2025).

A digital lending platform helps with configurable and responsive approach to mitigate operational, business, and regulatory risks among digital lending organizations. In order to boost market growth, the rising demand for virtual lending platform between financial institutions to reduce operating costs by modernizing operations across all borrowers and lenders is expected. In addition, growing customer requirements and increasing internet service adoption are also pushing banking, financial services, and insurance companies to migrate to digital business models. This further helps organizations with their channel selection to meet their customer requirements.

In order to accelerate market growth, technological advances such as e-mandates, biometric-enabled encryption, e-signatures, blockchain, artificial intelligence (AI), machine learning, and advanced analytics are expected to reduce fraud. For end-to-end digital platforms, a digital lending platform helps respond to the growing demand among financial institutions for improved customer experience. The digital lending platform also provides flexibility and acceleration to borrowers and lenders with an omnichannel customer experience. A higher consumer demand and expectation level is also expected to drive the market towards transparent transaction processes.

North America dominated the market in 2018 and the projected period is expected to continue to dominate. This supremacy can be attributed to the involvement of key players, advances in technology, and high demand for end-to-end digital financial solutions. The financial institutions are digitalizing their services to improve their customer experience due to the existence of a large number of mobile workforces in the

region. To separate themselves from competitors, financial institutions in the region are bringing digital technologies significantly into their offerings to retain a significant competitive edge.
