Abstracts

The North America Dust Control Systems Market would witness market growth of 4.2% CAGR during the forecast period (2019-2025).

Increased air pollution, rising health concerns, and strict air pollution regulations are expected to push market growth over the forecast period. Dust control systems are used to improve the quality of air emitted from manufacturing processes by removing contaminants and dust particles from gas or air. The system consists of a fan, a blower, a cleaning filter, and a removal system. Such dust control systems efficiently trap dust at the source with the help of components like enclosures and hoods. The dust collection system has several advantages, the most significant being a dust-free environment. There are generally two types of dust control systems, namely used-wet and dry.

The Clean Air Act (CAA) is comprehensive federal legislation that enables the Environmental Protection Agency (EPA) to set standards for air quality by controlling emissions of harmful air pollutants to protect public health. The agency implements several financial and technological measures to reduce air pollution levels and to manage air pollution in the U.S. As a result, the potential for dust control systems in the country is expected to see significant growth in the coming years.

Based on Product, the market is segmented into Wet and Dry. Wet Type is further segmented into Wet electrostatic precipitators (WEPS) and Wet scrubbers. Dry Type is further bifurcated into Bag Dust Collectors, Vacuum Dust Collectors, Electrostatic Dust Collectors and Others. Based on End User, the market is segmented into Construction, Oil & Gas, Pharmaceutical, Mining, Chemical, Food & Beverage and Others. Based on countries, the market is segmented into U.S., Mexico, Canada, and Rest of North

America.
