Abstracts

The North America E-Waste Management Market is expected to grow at a CAGR of 29.5% during 2016 -2022.

Technological changes, purchasing power among end users, low initial cost and high obsolescence rate have significantly contributed to rapid growth in e-waste accumulation. Purchasing power among the end users has given the power to upgrade to new technology as and when needed. The constant switching to newer devices and disposing of old ones has significantly contributed to the e-waste accumulation.

The limited life span of electronic devices such as refrigerators, mobile phones, televisions etc. has led to regular upgrade of these electronic devices and ultimately leading to e-waste. Considering the aforementioned factors, the need to manage e-waste effectively has been the need of the hour. Lenient regulatory policies and limited awareness among the citizens in most of the nations are the major causes that hamper the growth of the e-waste management market, globally. Nations around the world however are aggressively working towards raising awareness among the citizens and take effective measures to protect the fast deterioration of natural environment.
