Abstracts

The North America Emotion Analytics Market would witness market growth of 14.3% CAGR during the forecast period (2019–2025).

Human emotions can be analyzed through facial analytics, speech analytics, and video analytics. Generally, facial analytics holds the major market share and is expected to continue due to the need of the organizations to know the customer perception towards their brands. Facial expressions are better analyzed in three ways – tracking of facial electromyographic activity (FEMG), live observation & manual coding of facial activities, and automatic facial expression analysis with computer-vision algorithms. These techniques are used to identify human facial emotions through macro- & micro-expressions and subtle expressions.

Development of emotional analytics software needs large quantities of labeled emotion information. The information on feelings comes from video cameras that capture, for instance, facial expressions and microphones that collect information on speech tones. This information is fed into machine learning algorithms that learn to acknowledge phrases, tones and other features that correlate with particular feelings. Emotions identification technology of today typically categorizes feelings as anger, contempt, confusion, disgust, fear, frustration, happiness, sorrow, or surprise.

Based on Type, the market is segmented into Text Analytics, Speech Analytics and Facial & Video Analytics.
