## Abstracts

The North America Field Device Management Market would witness market growth of 6.4% CAGR during the forecast period (2019-2025).

With industry 4.0 increasing awareness, field device management is becoming a significant segment as it helps enhance lifecycle management and support for multi-platforms. It also provides wireless expense management, as well as reduces operational and maintenance costs. FDM is increasingly being implemented in mobile equipment management solutions with the increase of industrial automation and smart factories. This provides centralized control and monitoring of the product fleet in a warehouse setting or any distribution center, one of the key factors driving the growth of the demand in the distributed system world.

Since FDM lays the groundwork for remote deployment and management of mobile devices and applications, it offers business flexibility for companies to drive high productivity. The required automation efficiency stimulates the demand for FDM in automation tasks, including automated cost control and invoicing, installation of a large CNC machine, among other tasks. Growing investment in IIoT solutions and the growth of automation companies has provided an opportunity for the industry to expand effectively. The focus of the manufacturers on increasing operating and maintenance costs as well as delivering highly effective mobile device management solutions directly drives the growth of the industry.
