Enzymes break down the food further into compounds for absorption in the bloodstream. Combination of these enzymes provides complete digestive support when consumed with meals. This formula comprises of pepsin, which is used in pre-digesting proteins in the stomach. Betaine HCl creates an acidic environment in facilitating the task of pepsin. Soon after the food reaches the small intestine, the enzyme pancreatin starts the digestion process of protein, fats, and carbohydrates in the small intestine. Pancreatin helps to support the pancreas. Alpha-amylase digests starches. Bile salt makes fats soluble is preparing from further digestion by lipase. The enzymes papain and bromelain help in the digestion of proteins. Taking one capsule will help in digesting a minimum of 30 grams of protein, 20 grams of fats and 30 grams of carbohydrates. Food enzymes are safe in consumption and used by the food industry throughout food production which helps to improve the safety and efficiency of the process and the quality of foods.
